WATLING JCB

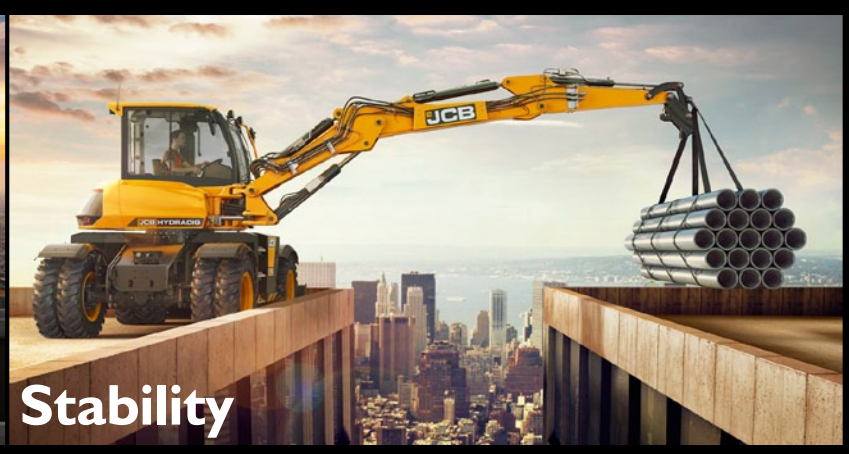

JCB HYDRADIG

ANOTHER JCB FIRST

Designed from the ground up, the JCB Hydradig is the first purpose-designed wheeled excavator on the market. This revolutionary new machine was developed to respond to five key challenges facing customers in today's construction sector.

Panoramic view with ability to see all four tyres

The shortest tailswing in class & out-lifts competitors

Press-and-go to 40kph with step-less transmission

3 steer modes. Under 4m turning radius. Reverse steer option

Complete all daily checks from ground level

Here's what two of our recent customers think…

It's a first for Smith Construction

"I needed to replace my wheeled excavator and bought a Hydradig before I'd even seen the machine in the flesh. I felt very confident that the spec, manoeuvrability and safety attributes were ideal for the 3 mile kerbing job we needed it for. Attending the official launch of the machine confirmed I had made the right purchase decision and I'm even happier with its performance out on site. It does everything it says on the tin, so to speak. A great machine and, as it turns out, it's also a TV star, having been the machine used in the filming of Jeremy Clarkson's new show, The Grand Tour."

Ian Smith, Smith Construction

GB Digger Hire first in Norfolk

"I spoke to our dealer, Watling JCB, about the new machine and was fortunate enough to be invited to the factory on the JCB helicopter to view a prototype. I took my machine operator and a customer with me and we were all able to drive the machine. We could immediately see the potential so ordered the first unit. Thanks to interest from other customers we've now ordered two more. They are exceptional machines which our operators really enjoy using. It bodes very well when you don't hear from the customer, but they opt to keep the machine on hire"

Graham Byrne - GB Digger Hire
