ISSUE 02 AUTUMN 2015

Welcome

Well that summer went by quickly and we're now being catapulted headlong in to the dark winter months. We sent you our first ever newsletter back in May and we were so pleased with your response that here we are again to bring you the very latest news. Since you last heard from us we've been busy adding even more machines to our fleet in response to customer demand. More details on new products can be seen below - as ever if you are interested in hiring any of these new units please contact your local depot and they will be pleased to help.

Many of you may have seen the recent episodes of DIY SOS on BBC 1. The huge and noble effort to transform a street of run-down houses in Manchester really caught the imagination of the public – particularly given that this was in aid of our serving soldiers and veterans. We were delighted to do our own bit for the same programme over the summer after being approached for help by the BBC. This was for two projects that were being tackled in Eckington and Cheltenham in July and August respectively. The programmes will be aired in the New Year as part of the next series.

James Clutterbuck, MD

WHC Hire - happy to help

As a prominent local supplier to construction businesses throughout Gloucestershire and Worcestershire, WHC Hire Services was only too pleased to help the BBC's DIY SOS with two inspiring projects over the summer.

We supplied the machines to convert the garden for Eckington based family, the Payne -Cheney's whose house needed re-modelling for Antonia, aged 17, who suffers from the debilitating condition Ehlers-Danlos Syndrome.

Our machines – including micro diggers, compactors, Stihl saws and more - can be seen transforming the outdoor space for year round use for Antonia.

In Cheltenham we helped with the transformation of a family home for Paralympic hopeful Scott Jones, 17. World champion shot-putter, Scott, is hoping to compete in the Tokyo 2020 Paralympics and the DID SOS project provided him with much need space to ensure he could get safely around in his wheelchair.

In each case the communities came together to support these two worthy local causes. Local traders volunteered their labour, materials were donated and equipment was loaned - including cement mixers, plate compactors, pedestrian rollers, min diggers and scaffold boards from WHC Hire.

MD, James Clutterbuck, said;

"As a business we look for opportunities to put something back in to the communities where our depots are located. These two projects were not only worth, but hugely inspiring and we were delighted that we could help."

Kubota Compact Tracked Dumper now available to hire

New to the market in 2015, Kubota launched its crawler dumper at UK show, Plantworx, this summer and we were so impressed we just had to add one to our fleet.

With a maximum loading capacity of 2500kg and a heaped volume of 1.49 m^3 this machine is designed for great site productivity. Unloading is fast and easy thanks to the profile of the skip - which has been designed for quick material discharge. It has a dumping angle of 84° so that every last bit of material can be tipped with ease. There's also a rotary function that allows sideways tipping through 180° - ideal for trench filling - or in restricted spaces.

On-site safety is always our primary concern - the KC250HR-4 features triple flange rollers and bogey type technology which ensures great stability on slopes and rough terrrain. What's more with a rear angle of gradeability of 27° and ground clearance of 334mm the dumper can easily avoid obstacles.

Of course on-site productivity is really important so the machine's quick travelling speed means loads can be transported in short times frames and for optimum comfort at high speeds the operator can select smooth drive.

Interested? Call us now to book.

More machines, more choice for you

It is always our aim to make your life easier and to ensure you have access to all the kit you need for your building projects. Over the summer we have been busy adding new machinery to our portfolio so that you only have to look for us here at WHC Hire for all your machinery and plant requirements.

Kubota Micro Excavators

With space becoming ever tighter on sites, we've increased our investment in small machines that can still pack a punch in confined spaces. The Kubota U10 is an ultra- compact, zero tail swing, mini with variable track width & simple fold down rollover frame. It allows access through most doorways and features hydraulic serve control giving the operator better control and smoother operation. It comes with a manual quick hitch complete with safety locking pin & offers two speed tracking.

Basic spec

Operating Weight:	1120mm
Digging Depth:	1800mm
Machine Width:	2210mm
Machine Height:	2230mm Roll Bar Up 1420mm Roll Bar Down
Bucket Sizes:	230/300/ 450/600mm Grade

Kubota sit-on mower

Not just a popular 'boy's toy' but a serious workhorse for gardens, estates and parks the Kubota G21 Hi Tip 'ride-on' tractor is ideal for the professional or keen amateur alike. It features a heavy duty chassis, high capacity HST, and a high back suspension seat for added operator comfort and convenience. The 'Glide Cut' system cuts and then channels cut grass into an integrated rear catcher in one operation. This can be swiftly emptied and closed via the hydraulic tip which is operated by a single lever.

The mower is powered by a liquid-cooled diesel engine that provides high torque, super combustion capability and exceptional fuel economy, while keeping noise and vibration levels low. The High Dump model allows the user to dump at variable heights, while on the move.

Basic spec

Engine Power:	21 hp / 15.7 kW
Fuel Tank Capacity:	22 litres
Cutting Width:	48" / 122 cm
Collector Capacity:	500 litres

Bumpa Hoist

Our credentials in H&S here at WHC Hire Services speak for themselves. We pride ourselves on our ability to find products that make lighter work for our customers and our new Bumpa Hoist does just that. From single to three storeys this machine provides fast and efficient movement of tiles, bricks, slabs and blocks to height. Ideal for roofers and builders, this unit is quick to get up and running and not only saves manual handling but also time to move a raft of building materials.

Basic spec

Length:	8m
S.W.L:	80kg
Fuel:	Petrol

Easy Cube

For the easy transportation of fuel on the public highways we have taken delivery of an Easy Cube, wheelie – bin style waterproof, bunded fuel tank. With a large capacity of 105 litres of diesel this is a highly portable solution for use where access is restricted. No ADR training required and fully approved by ABC.

Basic Spec

Capacity:	105lts
Dimensions:	600x510x1000
Weight:	57kg (152kg, full)
Power:	Manual
